

Street Surface Repair: Crest Drive Neighborhood

This summer the City of Eugene's Public Works Department will be paving several short sections of unimproved streets with thin-lifts (~ 1-inch) of asphalt throughout the City including the Crest Drive neighborhood. The sections vary from 75 feet to 400 feet in length and from 6 feet to the full width of the street. While the normal maintenance for unimproved streets is limited to filling potholes greater than 3 inches in depth, certain sections of some unimproved streets are so deteriorated that a thin-lift overlay is a more cost-effective measure than filling and re-filling potholes during the winter months. The life expectancy of a thin-lift overlay is from two to three years and is not intended to be a long-term solution for the deteriorated condition of the City's unimproved streets.

For more information, please contact Eric Johnson, Surface Operations Manager at 541-682-4904.
